

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
Artemis	Enterprise portfolio, project and resource management software products
Artemis 7	A web-based project portfolio management software that provides the framework for investment planning and control solutions
Artemis Views	An enterprise project and resource management solution delivers enhanced project management capability through a single, synchronized product suite
Artemis 9000	A project management system IBM Mainframe and Windows NT Systems used to develop custom applications that help control and run their businesses
Artemis Ontrack	A computer-based simulation workshop, trains project leaders and team members on both the hard and soft aspects of project and resource management
Asentinel	A global Telecom Expense Management application encompassing the entire lifecycle of wireless, wireline, data and equipment assets, invoices, orders and the associated Business Intelligence
Asentinel	A global Telecom Expense Management application encompassing the entire lifecycle of wireless, wireline, data and equipment assets, invoices, orders and the associated Business Intelligence
Assure	Solutions that help HP Quality Center customers achieve a standardized and enhanced use of HP Quality Center
Assure Project Harmonizer	A turnkey solution that will convert existing HP Quality Center projects to the structure of your QC Project Template
Assure Admin Console	Combines intuitive Administration tools with key reports and metrics that help you make critical decisions and optimize your HP Quality Center environment
Assure Test Data Integrity	A testing framework for HP Quality Center which automates and enhances key phases of the testing process, such as Test Set management and Defects entry, and improves the quality and reliability of your Test Data
Assure Trashbin	Protects your valuable Test Assets by moving deleted items to a special 'TrashBin' folder that can be traced and recovered
Blueprint	Software development requirements workbench that visually defines, simulates, validates, and publishes requirements to facilitate distributed software development collaboration
Requirements Center	An integrated collection of requirements editors that enable requirements authors to define all requirements within a single repository using patented visualization technology
Cenzic	Software and SaaS solutions that protect websites against hacker attacks through Black Box testing of web applications
Hailstorm	Enterprise- or desktop-level software solutions that protect websites against hacker attacks through Black Box testing of web applications
Chainbridge Technologies	Software platform automates the development and deployment of access-controlled, web-based, database applications
SQLDBI	A software product that allows users to quickly design and implement complex web-based, database applications via a graphical configuration utility
Citrix	A portfolio of virtualization, networking, and cloud computing technologies that enable virtual workstyles for users and virtual datacenters for IT
Desktop Virtualization	Solutions that virtualize desktops and application anywhere and on any device. Products include: XenDesktop, XenApp, XenClient, Citrix Receiver, GoToMyPC
Server Virtualization	Solutions to transform the datacenter and decrease costs, increase flexibility and improve IT responsiveness with enterprise server virtualization. Products include: XenServer and Citrix Essentials
Network Optimization	Solutions to accelerate application delivery and ensure a high definition experience for branch and mobile users. Products include: NetScaler, Branch Repeater, Access Gateway
Cloud	Solutions to host, manage and deliver cloud-based computing services. Products include: Citrix OpenCloud
Collaboration	Solutions to meet, support and train online. Solutions include: GoToMeeting, GoToWebinar, GoToTraining, HiDef Conferencing, GoToAssist, GoToManage
CloudOne	Software-as-a-Service licensing of IBM Rational software products
TestStorm	Cloud-based Load Testing using Rational Performance Tester
EcoSphere	Custom Collaborative Workbenches in the Cloud

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
Breeze	Moving IBM Rational ClearCase and ClearQuest to the Cloud
Forecast	Cloud hosted IBM Rational Focal Point
Vortex	Collaborative ALM in the Cloud using Rational Team Concert
CorreLog	Security information and event management (SIEM) solution combined with deep correlation functions
CorreLog Security Correlation Server	Combines log management, Syslog, Syslog-NG, SNMP, auto-learning functions, neural network technology, proprietary semantic correlation techniques and highly interoperable ticketing and reporting functions into a unique security solution. Solutions available for: Mainframe, Windows, Unix & Linux, and other devices
Deque	Web site accessibility compliance (Section 508) automation tools
Worldspace	A comprehensive and scalable enterprise tool that automates testing for Accessibility (Section 508 and WCAG), privacy, quality and security for large enterprise websites and applications
FireEyes	Web accessibility tool that ensures both static and dynamic content within a web portfolio (including JavaScript) are compliant with standards such as Section 508, WCAG 1.0, and WCAG 2.0
Dot Hill	Unified, virtual storage solutions solutions for storing, sharing, protecting and managing data
AssuredUVS	Storage virtualization appliances that combine the industry's most flexible and extensive storage hardware platform with breakthrough virtualization software and automated management
AssuredSAN	High performance and capacity storage arrays with innovative and comprehensive storage management allowing for instant Store, Back up and Restore
Data Protection Software	Available for all of Dot Hill's SAN storage arrays to provide solutions for data protection, business continuance, disaster recovery, application support and regulatory compliance.
dynaTrace	Continuous Application Performance Management solutions for business-critical Java and .NET applications across the entire software lifecycle
dynaTrace	A set of products that enable a building-block approach for implementing Continuous APM step-by-step, in each lifecycle phase: Development Edition, Test Center Edition, Test Center Standard Edition, and Production Edition
Embarcadero (CodeGear)	IDE and database tools to design, build, optimize, and run software applications and databases across multiple platforms and programming languages
All-Access	Access all Embarcadero tools from a single interface and experience the power of on-demand tooling
Design and Architecture	
ER/Studio XE	The ultimate design and modeling solution for enterprise information architecture
ER/Studio Data Architect	A data modeling tool for that enables companies to design, understand, discover, document, and re-use data assets
ER/Studio Business Architect	A process and conceptual modeling tool that enables architects to easily document business processes and how they access data
ER/Studio Software Architect	Visually analyze and design complex applications on the UML 2.0 specification
ER/Studio Portal	Centralized self-service reporting and searching of ER/Studio metadata
Schema Examiner	Automated error checking that performs a comprehensive set of diagnostic tests that validates the schema to ensure that the rules of the relational model are enforced
Application, Web and Java Development	
RAD Studio	A complete rapid application development solution with everything software developers and ISVs need for building native Windows®, .NET, Web, and database applications
Delphi	A development environment for software developers and database application developers who need to rapidly deliver high performance and easy to maintain Windows applications
C++ Builder	A solution for rapidly building native Windows applications using the C++ language and libraries
Delphi Prism	New Delphi, Visual Studio-based development solution for .NET and Mono

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
RadPHP	A RAD visual PHP development environment that includes a powerful code editor, debugger, profiler, database tools and much more
JBuilder	The leading cross-platform environment for building industrial-strength enterprise Java applications
3rdRail	An IDE that brings high efficiency coding and visualization tools to Ruby on Rails development and streamlines the creation of database-backed web applications while retaining the dynamic nature of Ruby programming
TurboRuby	An IDE that brings high efficiency coding and visualization tools to Ruby development and streamlines Ruby development while retaining the full dynamic nature of the Ruby language
Database Management and Development	
DB PowerStudio	A toolset that provides DBAs and developers with a highly-intuitive toolset that helps simplify cross-platform database administration, development, and performance tuning
DBArtisan	A cross-platform database administration solution, helps DBAs maximize availability, performance and security
Rapid SQL	An integrated toolset of cross-platform database development environment for tuning and editing code
Change Manager	A tool to automate, manage, and track complex database schema changes
Performance Optimization	
DB Optimizer	SQL profiling and tuning IDE that enables developers and DBAs to quickly discover, diagnose, and optimize poor-performing SQL
J Optimizer	Java profiling and tuning IDE for delivering high-performance, high-quality, scalable Java applications
Embedded and Workgroup Databases	
InterBase	A powerful database for embedded and business-critical small-to-medium enterprise server applications
EmbeddedPlus	Suite of products that integrate and extend the functionality IBM/Rational products including ClearQuest, RSDP and DOORS; integrate DOORS with Eclipse framework-based products and plug-ins; and provide SysML language support
DoorKeeper for the Rational Development Platform	Provides a seamless integration between DOORS and the Rational Software Development Platform allowing teams to keep designs consistent with requirements
DoorKeeper for Eclipse	Integrates the DOORS requirements management tool into Eclipse-based environments
DoorKeeper for ClearQuest	Integrates the DOORS requirements management tool with IBM Rational's ClearQuest change management tool
DoorKeeper for ClearQuest Change Proposal System	Allows users to propose and commit changes to requirements stored in DOORS using IBM Rational ClearQuest's record life cycle
SysML Toolkit	An add-in product to the IBM RSDP that provides SysML language support and related features to IBM Rational Software Modeler/Architect (RSM/RSA) and Rational Systems Developer (RSD).
Simulation Toolkit	An add-in product to IBM RSDP that provides the ability to simulate and execute UML2 and SysML models created using Rational Modeler/Architect, Rational Systems Developer (RSD) and the EmbeddedPlus SysML Toolkit
DO-178B Safety Critical Framework	Provides a framework for running applications in which C or C++ code is generated from a model driven development tool
Enterprise Elements	Database repository tool to manage large quantities of Enterprise Architecture and EA-like data in the context of a managed, full-lifecycle process
DataTraction	A tool to centrally manage fragmented corporate data assets through centralized, secure online data management environments with little more effort than required to create a spreadsheet
Elements Repository	A scalable Web-based solution to manage and analyze dynamic, highly-interrelated data and metadata featuring a configurable database-like platform that allows the rapid construction of complex enterprise-ready systems
DoDAF Elements	A CADM-compliant repository that facilitates the consistency, correctness and completeness of DoDAF views and products across multiple modeling tools from various vendors, with various metamodel implementation variants
Hitachi Data Systems	Storage systems, storage networking, storage software and IT operations software that make IT virtualized, automated, cloud-ready and sustainable
Storage Systems	A complete portfolio of storage systems and NAS subsystems to optimally consolidate your storage infrastructure and provide best-in-class availability and performance

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
Storage Area Networking	HDS leverages its partnerships with Brocade, Ciena, Cisco Systems, Emulex and QLogic to support SAN technology that makes large storage pools shareable across the enterprise, centralizes storage management and improves storage utilization
Storage Software	A complete portfolio of storage systems and NAS subsystems to optimally consolidate your storage infrastructure and provide best-in-class availability and performance
IT Operations Software	Two software solutions to help you understand precisely what's happening across devices and environments, to better manage costs, risks and assets: IT Operations Analyzer - One tool to monitor all your devices; IT Operations Director - All-in-one lifecycle management
BladeSymphony Servers	Two powerful blade servers that allow you to increase server performance and availability without dramatically increasing the size, cost and management complexity of an ever growing data center
HP Software	A portfolio of Business Technology Optimization solutions that addresses business and IT alignment, application quality management, service management, and data center transformation
HP Application Security Center	Application security software that finds security vulnerabilities in software that is under development, in production or procured from vendors. Products include: HP Assessment Management Platform, HP QAInspect, HP WebInspect
HP Business Availability Center	HP Business Availability Center allows you to optimize the availability, performance and effectiveness of business services and applications. Products include: HP BAC Software for Composite Application Management, Business Process Insight, Business Process Monitor, HP Business Service Level Management, HP Diagnostics, HP Discovery and Dependency Mapping, HP End User Management, HP Problem Isolation, HP Real User Monitor, HP Universal CMDB Software, HP System Availability Management, HP TransactionVision
HP Client Automation Center	HP Client Automation Center helps you manage client devices effectively and efficiently, reduce operational costs, improve quality of service, and keep clients secure and compliant. Products include: HP Client Automation Enterprise, HP Client Automation Standard
HP Data Center Automation Center	HP Data Center Automation Center helps you automate IT management, provision new infrastructures and manage change and compliance in your data center to dramatically improve cost efficiency and reduce risk. Products include: HP Business Service Automation Essentials, HP Discovery and Dependency Mapping, HP Network Automation, HP Operations Orchestration, HP Release Control, HP Server Automation, HP Service Automation, HP Storage Essentials, HP Universal CMDB
HP Network Management Center	HP Network Management Center helps you increase service levels to business users, align IT with business objectives and decrease your IT cost structures. Products include: HP Network Node Manager (NNM), HP Performance Insight, HP Route Analytics Management, HP TeMIP Software
HP Operations Center	The HP Operations Center helps you optimize the management of technology across IT domains – and provide a reliable service infrastructure to your business teams. Products include: HP Discovery and Dependency Mapping, HP GlancePlus Pak, HP Operations Manager Dependency Mapping Automation, HP Operations Manager for BlackBerry Enterprise, HP Operations Manager i 8.10, HP Operations Manager, HP Operations Smart Plug-ins, HP Performance Manager, HP Reporter, HP SiteScope, HP Universal CMDB
HP Performance Center	HP Performance Center helps you validate and analyze the performance of your applications against business requirements – and mitigate the risk associated with application deployment and upgrades. Products include: HP Diagnostics, HP LoadRunner (sometimes mistakenly called RoadRunner), HP Performance Center, HP Test Data Management
HP Project & Portfolio Management Center	HP Project and Portfolio Management (PPM) Center standardizes, manages and captures the execution of project and operational activities. Products include: HP Deployment Management module, HP Discovery and Dependency Mapping, PPM Demand Management, PPM Financial Management, PPM Program Management, PPM Program Management module, PPM Resource Management module, PPM Time Management module, PPM Project and Portfolio Management Center, HP Test Data Management, HP Universal CMDB software
HP Quality Center	HP Quality Center manages and governs quality processes – and automates software testing across your IT and application environment. Products include: HP Business Process Testing for Oracle environments, HP Business Process Testing for SAP environments, HP Business Process Testing, HP Center Management for Quality Center, HP Change Impact Testing for SAP Applications, HP Functional Testing, HP Quality Center, HP QuickTest Professional, HP Requirements Management, HP Service Test Management, HP Service Test
HP SOA Center	HP SOA Center helps you accelerate your SOA transformation by managing and governing the service lifecycle. Products include: HP Discovery and Dependency Mapping, HP SOA Governance Interoperability Framework (GIF), HP SOA Systinet, HP Universal CMDB software
HP Service Management Center	HP Service Management Center is a comprehensive, ITIL-based solution for IT service, asset and identity, and access-management. Products include: HP Asset Manager, HP Connect-It, HP Discovery and Dependency Mapping, HP Service Manager, HP Universal CMDB software

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
HP Servers and Storage	From easy to own entry level servers to highly expandable & scalable products & services, HP allows you to focus on the business by providing reliable, hassle-free technology
Proliant Servers	Industry-standard servers and solutions that deliver confidence and reliability
Blades	Infrastructure in a box proven to save time, power and money in datacenters large and small
Integrity	A server portfolio that provides flexible capacity, secured availability and simplified management
Integrity NonStop	Servers tht provide 24/7 continuous availability to critical data in real time through the use of unique, loosely coupled architecture providing unprecedented reliability, manageability and scalability
IBM Software	A portfolio of application development, information management, collaboration, IT service management and SOA tools
Rational Software	IBM Rational software helps organizations automate, integrate, and govern the core business process of software and systems delivery. Products include: AppScan, AssetManager, Breeze, Build Forge, Business Developer, ClearCase, ClearQuest, Dashboard, Developer, DOORS, Focal Point, Functional Tester, Insight, Rational Lifecycle Package, Logiscope, Modeler, Performance Tester, Policy Tester, Portfolio Manager, Purify, PurifyPlus, Quality Manager, Requirements Composer, RequisitePro, Rhapsody, Robot, Rose, Service Tester for SOA Quality, SoDA, Software Analyzer, Software Architect, System Architect, Systems Developer, Systems Tester, Tau, Team Concert, Team Webtop, Test Lab Manager, TPF Toolkit, VisualAge
WebSphere Software	Software for SOA environments that enables dynamic, interconnected business processes, and delivers highly effective application infrastructures for all business situations. Products include: IBM ILOG CPLEX, IBM ILOG Elixir, WebSphere Application Server, WebSphere Datapower, WebSphere ILOG JRules, WebSphere MQ, WebSphere Portal Server, WebSphere Process Server
Tivoli Software	A platform to manage infrastructure, operations and IT processes. Products include: Intelligent Metering Network Management, IBM Maximo Asset Management, IBM Security zSecure Suite, IBM Smart Business Appliances, Tivoli Endpoint Manager, Tivoli Monitoring, Tivoli Storage Flashcopy Manager, Tivoli Storage Manager
Information Management Software	Software helps you manage your data and content, pull together trusted information that cuts across diverse silos, and also gain valuable insights to optimize your business. Products include: Cognos, Cloudscape, CommonStore, Content Analyzer, Content Integrator, Content Manager, DB2 Connect, DB2, Rational Data Architect, FileNet, InfoSphere, OmniFind, Optim, UniData, UniVerse
Lotus Software	Security-rich software that enables businesses to communicate, collaborate and increase productivity. Products include: Notes, Domino, Sametime, Connections, Quickr, Forms, Foundations, Web Content Management, LotusLive, Mashup Center, WebSpehere Portal, 1-2-3, Mobile Connect, Organizer, Protector, Symphony, Workforce Management, Workflow
Idera	Tools for Microsoft SQL Server, SharePoint and PowerShell management and administration including performance monitoring, backup and recovery, security and auditing and PowerShell scripting
SQL Server Products	Products include: SQL compliance manager, SQL defrag manager, SQL diagnostic manager, SQL mobile manager, SQL safe backup, SQL secure
SQL Toolbox	Products include: SQL admin toolset, SQL comparison toolset, SQL doctor, SQL safe lite, SQL virtual database
SharePoint Products	Products include: SharePoint admin toolset, SharePoint backup, SharePoint diagnostic manager, SharePoint enterprise manager, SharePoint migration suite, SharePoint productivity toolbox
PowerShell Plus	An advanced Interactive Development Environment for PowerShell
IndustrialMedium	XML content management solutions to manage complex content production processes and dynamic Web sites, and achieve the goals of information sharing standards compliance
Expressroom	XML-powered content management system to build, deploy, and update large and complex Web sites. Expressroom's rich work environment satisfies the needs of content creators, managers, and developers alike
Expressroom IC	An XML-based content management system that reduces the cost and complexity of managing content that promotes information-sharing and standards compliance, while minimizing the impact on analyst production
Document Assistant	A two-way solution that transforms files to XML, and it also transforms XML files back into their original formats

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
iTKO	An integrated product suite that helps customers move enterprise applications into the Cloud, from development to delivery
LISA Virtualize	Provides test and development teams realistic test environments and eliminates dependency constraints caused by unavailable or inaccessible systems by "virtualizing" or capturing and modeling the target system's dynamic behavior, performance and data
LISA Test	An automated end-to-end testing solution that directly verifies heterogeneous technologies across all application tiers in a codeless environment: automates unit, functional, regression, system integration, load and performance testing
LISA Validate	Validates functional and business outcomes continuously and at every change event in the development lifecycle for underlying components and end-to-end processes in order to prevent the unintended consequences of change - works in conjunction with governance and policy infrastructures
LISA Pathfinder	Provides complete transparency and traceability across all application tiers to quickly identify root cause defects, streamline defect collaboration between Development and QA, and automatically generate detailed regressions and virtual models
Jacada	Unified desktop and process optimization software solutions for call centers that bridge disconnected systems into a single, intelligent workspace, without requiring modification or replacement of existing systems
WorkSpace	Provides a single user interface to the mission-critical applications and tools required by customer service reps for effective customer interactions
Fusion	A non-invasive process optimization platform that delivers process simplification, workflow automation, call scripting, a vast array of dashboards, reports, and alerts for call center reps and managers
Lancope	An enterprise network security monitoring platform that combines flow-based anomaly detection and network performance monitoring into one integrated platform
StealthWatch Management Console	Manages, coordinates and configures all StealthWatch appliances to correlate security and network intelligence across the enterprise
StealthWatchXe FlowCollector	Leverages Cisco NetFlow™ traffic accounting technology or traffic information from sFlow to extend network protection and traffic analysis across geographically dispersed or multi-gig enterprise networks
StealthWatch FlowSensor	Delivers flow-based Response Time Management (RTM) that provides comprehensive visibility of network and server performance metrics
StealthWatch FlowSensor VE	A free virtual appliance, provides anomaly detection and network performance monitoring for virtual environments
StealthWatch IDentity	Automates user identification, streamlines remediation efforts and delivers powerful auditing capabilities for regulatory compliance
StealthWatch FlowReplicator	Improves enterprise network performance by aggregating NetFlow, sFlow, syslog and SNMP information in a single, high-speed appliance
McAfee	Security software and appliances that provide protection for networks, systems, devices and data for enterprises of all sizes
McAfee Total Protection for Data	Provides strong encryption, data loss prevention, authentication, and policy-driven security controls to protect critical data 24/7
McAfee Endpoint Encryption	Provides powerful encryption and strong access control to prevent unauthorized access to sensitive data and render it useless in the event of loss or theft
McAfee Host Data Loss Prevention	Monitors and controls how employees use and transfer business data through all channels—in the office, at home, and on the move
McAfee Device Control	Monitors and restricts data copied to removable storage devices and media to keep it from leaving company control
MetaVis	A suite of products to create, manage and migrate SharePoint 2010, 2007 and 2003 taxonomies and content and organize and re-organize SharePoint environments
Architect for SharePoint	A graphical design tool for the creation and deployment of your SharePoint taxonomy, content types and structure
Migrator for SharePoint	A simple tool for migrating content and objects between SharePoint sites, site collection or servers that provides a convenient and familiar way of moving SharePoint data
Change Manager for SharePoint	A tool to automate, manage and deploy changes, taxonomy updates and structure between multiple SharePoint environments
Classifier for SharePoint	A bulk re-organization tool for SharePoint content that fully supports SharePoint 2010 Managed Metadata tagging
Cloud Classifier	A tool that enables SharePoint users to easily bulk tag, classify, copy and import their content directly from the SharePoint 2010 Ribbon

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
Folders for SharePoint	A SharePoint control that automates tagging and classification by copying folder metadata to any content stored inside
Office 365	A tool for simple, quick and agentless cloud migration to Office 365
Micro Focus	A portfolio of application development, application modernization, application portfolio management, and testing & software quality products
CaliberRM	Requirements management software that facilitates collaboration, impact analysis and communication throughout the software development lifecycle
StarTeam	A software change and configuration management tool, designed for both centralized and geographically distributed software development environments
Silk	An integrated suite of quality assurance, control and management software. The suite includes: SilkTest, SilkCentral Test Manager; SilkPerformer, CloudBurst and Diagnostics
Together	A visual modeling platform for software architecture design that enables you to analyze, design and implement flexible and maintainable software architectures that can be modified as requirements change
RUMBA	Terminal emulation tool that provides connectivity from Microsoft Windows desktops to virtually any host system with mission critical reliability
OnWeb	A platform solution for application modernization, integration and desktop emulation replacement
VisiBroker	A CORBA ORB-based environment for developing and deploying distributed applications that supports development in Java™, C++, and .NET languages including Microsoft C++ and C#
Enterprise	Enterprise application migration, development and test workload rehosting tools
i.Sight	Application portfolio management and analysis tools that enable strategic planning, and application overhaul and modernization
MKS	Application lifecycle management (ALM) solutions that help companies manage software development activities through a single enterprise application
MKS Integrity	An enterprise application lifecycle management platform that coordinates and manages all activities and artifacts associated with developing software as part of an embedded product or as a standalone application
netForensics	Security information management and log management software, appliances, and managed security solutions for small, midsize, and large organizations
nFX Cinxi One	Combines log management, real-time event correlation and alerting, remediation, and reporting in a single high performance solution
nFX SIM One	An enterprise Security Information Management (SIM) solution that collects and manages security and network data, in order to quickly identify and respond to threats and address compliance challenges
NewsGator	Collaborative computing solutions for communities of practice, learning, professional development, and knowledge management that help government organizations meet Open Government Initiatives
Social Sites for SharePoint 2007 (MOSS) and SharePoint 2010	Create rich social profiles, share ideas and expertise, and effectively communicate with colleagues using all of the most promising features from consumer social networking and community software
Tomoye	The future of communities of practice, collaboration, and social learning with support for DoD security standards, accessibility standards such as section 508
Odin Technology	Software that makes test automation easier, quicker and more cost effective to implement and maintain
Axe	Software that makes test automation easier, quicker and more cost effective to implement and maintain
Pragmatica Innovations	Enterprise-level solutions for data modeling, visualization, analysis, and optimization
Data Enabled Enterprise Modeler (DE2M)	An enterprise modeling solution that combines the utility & flexibility of Microsoft Visio with Oracle's relational database power
Data Enabled Enterprise (DE2) Repository	A fully web enabled, enterprise level repository for visualization, rapid analysis and optimization
Visio Stencil Sets	A variety of Microsoft Visio stencils 'data enabled' for DE2M are available or can be custom built to your design

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
ProInfo	Enterprise security solution that predicts all possible paths of cyber attack within your enterprise
CAULDRON	Enterprise security tool that puts vulnerabilities in context by aggregating data; correlating that data against the known vulnerability data sets; and providing a modeling environment for "what if" analysis and visualization
R1Soft	Continuous data protection (backup, restore, and disaster recovery) solutions for Windows and Linux server data protection
Windows CDP	High performance disk to disk backup software for Windows servers with central management and data repository
Linux CDP	High performance disk to disk backup software for Linux servers with central management and data repository
Safecore (InBoxer)	Products and solutions for email archiving, electronic discovery, content monitoring and virtual data rooms - available as an on-site appliance, VMWare virtual appliance software, or a fully hosted and managed service
InBoxer At-Risk Appliance	An intelligent email archiving and retrieval system that speeds up investigations, reduces litigation costs, manages policy risks, and cuts IT operational expenses
SCO	UNIX-based business computing platforms for distributed, embedded, network-based, and mobile computing environments
OpenServer	UNIX operating system
UnixWare	UNIX operating system for enterprises
Security Innovation	Secure software lifecycle management solutions that help companies to build and deploy secure software applications and reduce information risk
eLearning (TeamProfessor)	An eLearning system that delivers expert knowledge in a cost-effective manner without compromising technical depth. Topics include: secure development, security testing, software security awareness, process / design
TeamMentor	A Web-based software security learning and knowledge management system, providing each development team member complete security guidance up front and as they code
NEO for Java	The smallest and fastest public key-based Java security product in the world, providing encrypted data transfer and user authentication services that overcome these historic constraints
NEO for C	A public key cryptography system (PKCS) that provides application developers the tools to ensure confidentiality, authentication, and integrity in any C/C++ environment
NXP Libraries	A software-based encryption solution optimized specifically for general-purpose ARM7/ARM9 microcontrollers
Smart Bear Software	Quality assurance tools that cover the complete application lifecycle including requirements, deliverables, tests, defects, and support
TestComplete	An automated testing tool with support for unit, functional, regression, distributed and HTTP performance testing at the project level
QAComplete	A testing tool providing complete test coverage, requirements management and defect tracking
AQtime Pro	A performance profiling and memory and resource debugging toolset for 32- and 64-bit Windows, .NET and Java applications as well as VBScript and JScript code
CodeCollaborator	A web-based tool that simplifies and expedites peer code reviews with team members in other locations
ALMComplete	Manages all components of the software development lifecycle, including requirements, project deliverables, test cases, defects, and support tickets - coupled with collaborative features like document sharing, team calendars, interactive dashboards, knowledge bases, and threaded discussions
SonicWALL	Network security, secure remote access, Web and e-mail security, continuous data protection, and policy and management solutions for enterprises of all sizes
UTM / Firewall / VPN	A family of network security appliances that combines Deep Packet Inspection with robust Unified Threat Management (UTM) security services
Endpoint Security	Endpoint security solutions that provide anti-virus, anti-spyware, anti-spam and anti-phishing protection to network servers, desktops and laptops.
SSL VPN Secure Remote Access	Secure remote access to resources from virtually any end point—including desktops, laptops, PDAs and smartphones
Anti-Spam / Email Security	An anti-spam, anti-virus, anti-phishing, policy, and compliance management e-mail protection solution. Available as a hardened appliance or as Windows software

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
Backup & Recovery	A complete end-to-end backup and recovery solution for SMBs
Centralized Management & Reporting	An architecture for centrally creating and managing security policies, providing real-time monitoring and alerts, and delivering intuitive compliance and usage reports, from a single management interface
Symantec	Tools to protect and manage your virtualized infrastructure with backup and recovery, storage management, and high availability and disaster recovery solutions
Security	Security management, messaging security, endpoint security and web security solutions that protect against a growing array of increasingly sophisticated threats
Information Risk & Compliance	IT compliance, discovery & retention management and data loss prevention solutions to ensure compliance with external regulations and internal policies for securing and managing information
Storage	Storage management, archiving and data protection solutions that optimize the way information is managed throughout its lifecycle
Infrastructure Operations	Endpoint management, IT service management and endpoint virtualization solutions that standardize, automate, and consolidate infrastructure operations to reduce complexity and costs and improve efficiency
Business Continuity	Disaster recovery, high availability, virtualization management and green IT solutions that protect against the effects of planned and unplanned downtime
TestPlant	QA automation and software testing solution
eggPlant	A low-overhead, non-invasive black-box test and process automation tool
Trustwave	Comprehensive suite of data security and compliance management solutions that help government agencies protect their information from unauthorized access and comply with data security regulations and industry standards such as the PCI DSS and FISMA
SIEM for Government	SIEM solutions collect, analyze and store logs from networks, hosts and critical application
DLP for Government	Data loss prevention solutions that precisely monitors data and provide predefined compliance packages that specifically address standards such as PCI DSS, HIPAA and GLBA
NAC for Government	A network-based solution that requires no agent software and automatically performs risk assessments on all end-points-regardless of IP device type or operating system, or whether the end-point is managed or unmanaged
Encryption for Government	An encryption solution that travels with sensitive data wherever it traverses a government entities' network, whether through file transfer, e-mail communication or USB portable storage
PCI DSS for Government	Validate compliance with the Payment Card In - Report on Compliance (ROC) or Self Assessment Questionnaire and Vulnerability Scanning reports - to demonstrate compliance
Verdasys	An enterprise information protection solution that protects and manages the flow of data and prevents information leakage across the global enterprise, including the extended partner/supply chain
Digital Guardian	An enterprise level information security platform that protects against the misuse, compromise or loss of data across the enterprise
VersionOne	Agile project management tools that provide integrated support for customer product planning, requirements definition, release and iteration tracking, and defect and test management
VersionOne Ultimate	A complete, end-to-end agile lifecycle management solution for teams that want to scale their agile initiatives throughout their organizations
VersionOne Enterprise	An on-demand and on-site agile management solution that supports multi-project, multi-team planning and tracking; and provides centralized collaboration across multiple projects, teams, and locations
VersionOne Team	A 100% web-based tool with built-in agile workflow that offers small teams new to agile the simplicity of a spreadsheet with the benefit of built-in agile workflow - all in a free, 100% web-based planning tool
WCC	Smart search and match software that can be conveniently customized to work with any organization's data requirements
WCC Elise ID	A platform for Multi-Modal Fusion that delivers smart identity matches by using multi-modal fusion across multiple data sources including: biometrics, bio-graphic data, and ancillary data that might include video capture, unique traits or features, criminal or travel history or even PIN, barcode, or RFID data
WSO2	The only built-for-purpose SOA middleware stack available in the industry today
WSO2 SOA Enablement Server for C++	A high-performance, industrial-strength Web services API and development and runtime environment for building and deploying Web services in C/C++ that provides proven interoperability with Java-based Web services frameworks and Microsoft .NET

Spectrum Systems, Inc.

Key Manufacturers and Key Products - May 2011

Key Product / Category	Product Description
WSO2 SOA Enablement Server for Java	A robust enterprise-ready Web services platform that can run as a stand-alone service, or deployed onto one of the major J2EE application servers, such as BEA WebLogic, IBM WebSphere, and Sun ONE Application Server
